TOP 10 REASONS WHY POLAR SEAL WINDOWS ARE BETTER THAN THE COMPETITION

The beef is in a Polar Seal (right)

1. How about more vinyl in your vinyl window?

Thicker, more numerous walls leave less chance for cold winter winds to seep in through your windows. Plus, more chambers have been proven to insulate just as well as foam filled frames.

2. Superspacer, the only *true* warm-edge.

Our silicone foam air spacer separates the inner and outer panes of glass, slowing temperature transfers much better than metal spacers. SuperSpacer[®] conducts 100 times less temperature than other "warm edge" steel spacers, reducing the chance of condensation, sweat or mold growth. It also reduces noise transmission by 18%.

Less chance of condensation with our no-metal spacer (right)

3. The #1 rated Low-E glass for where we live

As winter gas bills soar, using the right kind of Low-E becomes even more important. Our "Hard Coat" Low-E has the same net heat loss as an R-19 wall because it allows more FREE solar energy in than any other Low-E option, including "Soft Coat".

Darker Low-E reduces FREE energy from the sun (Polar Seal on left)

4. Triple ultrasonically welded weatherstripping

We seal out drafts better with 50-100% more weatherstripping than our competition. Welded fibers remain effective longer than woven alternatives and our pile directors keep them standing up straight. Black weathestripping lasts longer and looks better years down the road by hiding dirt more effectively.

3 rows of weatherstripping

No fading or sagging with Polar Seal

5. Aluminum screen wire is longer lasting

We package your aluminum screens separately from your window, keeping them safe until installation. Once installed, aluminum screens hold up better than alternatives. They won't sag, fade or deteriorate like fiberglass screens.

Interlocking Sashes

6. Interlocking sashes reduce leaks

Interlocking sashes keep out the winter winds better than windows that simply rely on butting their sashes together and leaving the hard work to the weatherstripping.

Closed

7. Deep pocket sills and jambs cut down on the wind

90 degree angles make it much tougher for air to penetrate your home because our sashes fit down into deep pocketing jambs and sills.

Have you seen more choice in a vinyl window?

8. Dozens of color and wood grain options

Choose from 3 main colors, 4 simulated wood-look interior colors, and 5 exterior colors. Mix and match until you get the perfect look for your home.

Double strength glass (left)

9. Double strength glass has superior look and performance

Thicker glass resists breakage better and lays flatter than single strength glass, reducing the likelihood of awkward concave reflections.

Service after the sale

10. Uncompromising service with our Lifetime Limited Warranty

No other vinyl window manufacturer that we know of stipulates that they, the factory, will make house calls to service their products. Our warranty is worth much more than the paper it's printed on; it is a contract between Polar Seal and you.
